Två datorer och korsad kabel

 on Saturday the 18th of March 17' I did the assignment with the title "Två datorer och korsad kabel". I konected two generic desktop computers with each other with a copper cross over cable, that was connected to the FastEthernet0 port of both computers, (PC0 and PC1). I gave the IP 192.168.0.90 to PC0 and the IP 192.168.0.91 to PC1.
I did ping 192.168.0.91 to the cmd of the PC0 in order to communicate with PC1
I did ping 192.168.0.90 to the cmd of the PC1 in order to communicate with PC0.
Both Pings where successful.
